.NET Components – User Interface   Reporting   Business Intelligence

Syncfusion®
Deliver innovation with ease®

The Syncfusion advantage

Because time is money, and lacking either is just a headache.

Your development partner: With Syncfusion, you're not alone in the development cycle. We're there too with unmatched phone and online support. Our Direct-Trac support system is available 24-7, providing you easy access to the current status of an incident. Each license includes a one-year subscription and product updates—and unlike other vendors, we don't charge extra for phone support.

Built with the future in mind: Our products are geared toward long-lifecycle applications and are architected to meet high standards for flexibility and maintainability. We provide comprehensive support for the latest technologies, including .NET 4, Visual Studio 2010, Windows Phone 7, HTML 5, and jQuery to name a few.
Full source code: When cofounder Stefan Hoenig first started providing source code with products, little did he know he was establishing a standard for the entire industry. From the beginning, we've always believed in empowering developers. Our source code is redistributed and shipped in a tightly integrated manner—use our components in debug mode at the flick of a switch.

Straightforward, flexible licensing: Syncfusion components are licensed on a simple per-developer basis with no royalties, run-time, or server-deployment fees. Each licensed developer may install on multiple personal machines.

A viable base for standardization: The wide range of solid products in our suites allows our customers to reduce their dependence on multiple vendors and streamline their toolkits.
What you need to know about our studios

### Essential Studio Enterprise Edition

If you need it all, and want to do it all, then Essential Studio Enterprise Edition is all you could want. This comprehensive suite of components and controls is comprised of all the tools and libraries that are part of Essential Studio User Interface Edition, Reporting Edition, and Business Intelligence Edition. It's *the* one package you need to develop across everything—Mobile MVC, ASP.NET, ASP.NET MVC, WPF, Silverlight, Windows Phone, and Windows Forms.

### Essential Studio User Interface Edition

The first port of entry to your app is its interface. Essential Studio User Interface Edition includes everything you need to ensure users have a smooth journey. This studio lets you quickly and easily build enterprise-class desktop and Web applications with docking managers, Microsoft Office-style controls, gauges, maps, grids, charts, diagrams, and much more.

You can design Web applications using more than 60 AJAX-enabled controls or frameworks, or easily add advanced jQuery UI features. This suite includes high-performance grid, docking, and menu frameworks, data-binding controls, schedulers, data-bound charts, gauges, diagrams, and so much more we simply haven't the space to mention. .NET platforms included are Mobile MVC, ASP.NET, ASP.NET MVC, WPF, Silverlight, Windows Phone, and Windows Forms.

Essential Studio Reporting Edition

Provide business users with the reports they need, in the formats they prefer. Essential Studio Reporting Edition provides .NET components for reading and writing Excel, Word, and PDF documents, enabling applications to be more than a hundred times faster than Office automation. With this suite, you can create advanced reports or integrate document-based reporting into your applications. This suite is available for ASP.NET, ASP.NET MVC, WPF, Silverlight, and Windows Forms.

### Essential Studio Business Intelligence Edition

With Business Intelligence Edition, you can build an analysis interface into your application with gauges, charts, and grids—including pivot grids. It's a suite of controls that allows you to call upon both relational and OLAP data to create impressive executive dashboards. The supported platforms are ASP.NET MVC, WPF, Silverlight, and ASP.NET.

Essential Studio Enterprise Edition—The whole package, allowing you to pull all your .NET components from one place.

Developer-to-developer support—The people who write the controls support the controls. Their knowledge is yours.

Vast offering—Nearly 400 controls; that's more than six million lines of code!

Please download our fully functional 30-day evaluation by visiting www.syncfusion.com/evaluation

The one package you need for developing in ASP.NET MVC, ASP.NET, WPF, Windows Phone, Windows Forms, and Silverlight applications, including HTML 5 for mobile and desktop.

Moving forward

We don't sell a lot of our products based on gusto or showmanship. We find it's more effective to simply sell on facts spelled out in black and white. So, here they are:

• Syncfusion has over 336 discrete .NET controls.
• Our .NET offering represents over 50,000 development hours each quarter.
• Our response time to an incident is less than 24 hours.
• We've also collected over 2,000 use-case samples you can access.
• We've written over six million lines of code for our products, and we're writing even more.

Let's get a relationship started

We'd like the opportunity to prove ourselves to you. After that, you be the judge.
Here's how to get things started.

1. **Download our evaluation–**Go to www.syncfusion.com/evaluation for a fully functional, 30-day trial of all our studios.

2. **Utilize our support during the trial**–All trials come with full support. Please call on our support staff to help you during the evaluation.

3. **Review our use-case samples**–To give you ideas and solutions, we've collected hundreds of samples you can implement in your product.

4. **Schedule an online demo**–Once you're familiar with our product and have worked with our samples, you'll have more detailed questions concerning what else our products can do. Set up a demo with one of our engineers so we can show you.

5. **Talk to an account manager**–Before the evaluation expires, contact your dedicated account manager. This is the person responsible for meeting your project requirements and helping you achieve your business goals.

We'd love to hear from you
